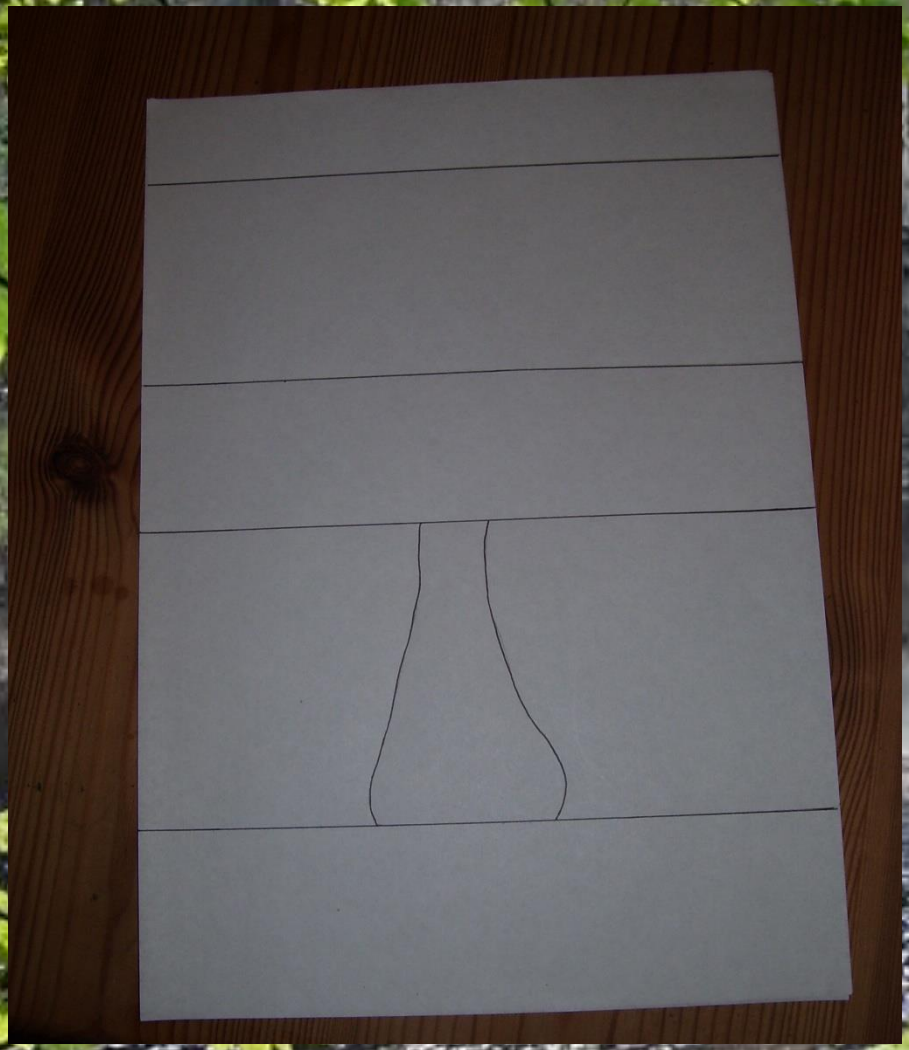
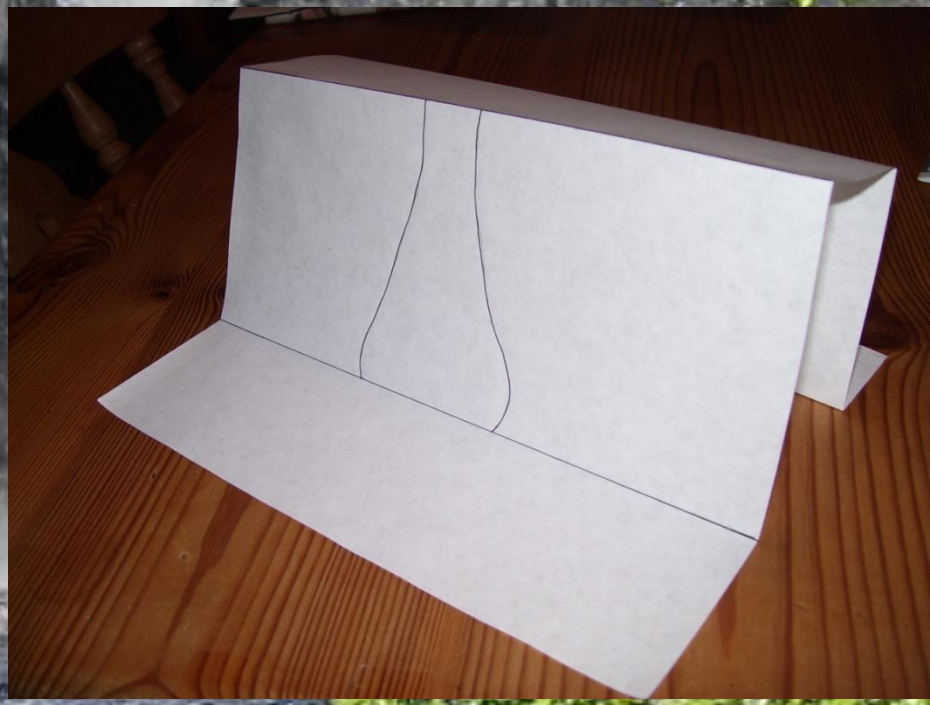
How is a waterfall formed?

You will need
• Your book
• A template
• A stick of glue
• Scissors
• Pencil crayons- blue and brown
• A pen

step 1

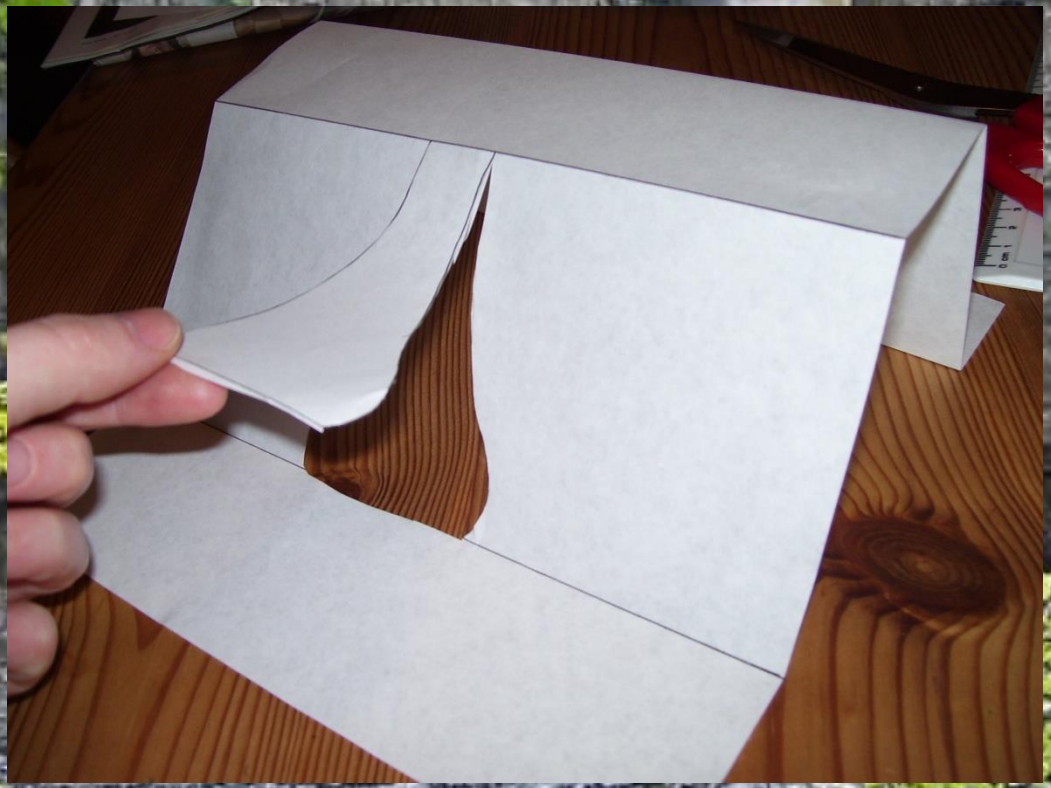
Fold along all the horizontal lines.





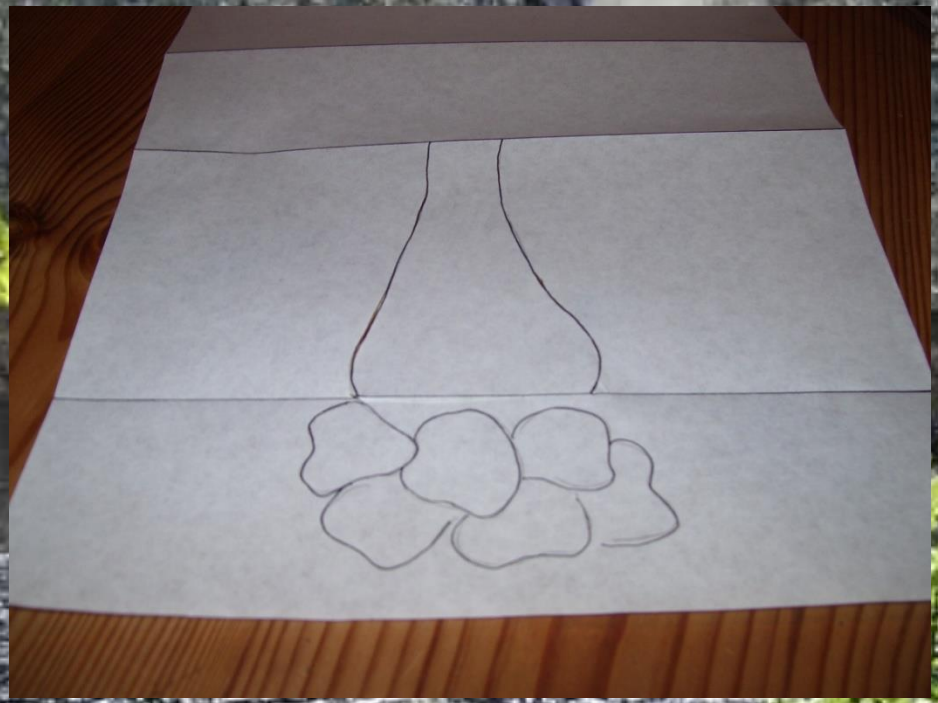
step 2

Using a scissors carefully cut out the section.



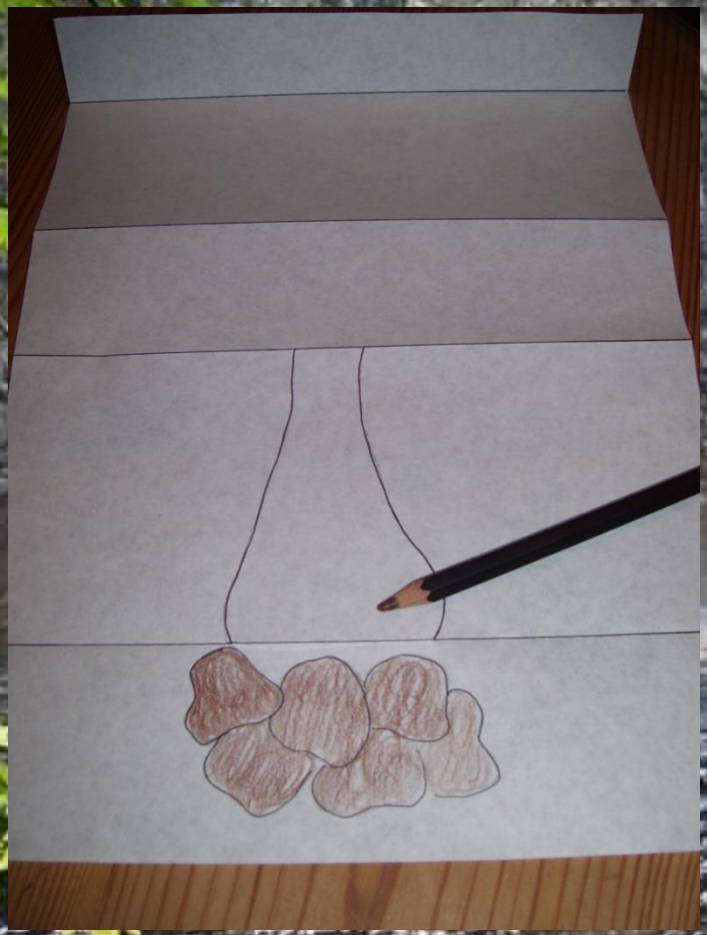
Step 3

Using a pencil draw in rocks below the flap you have just cut out.



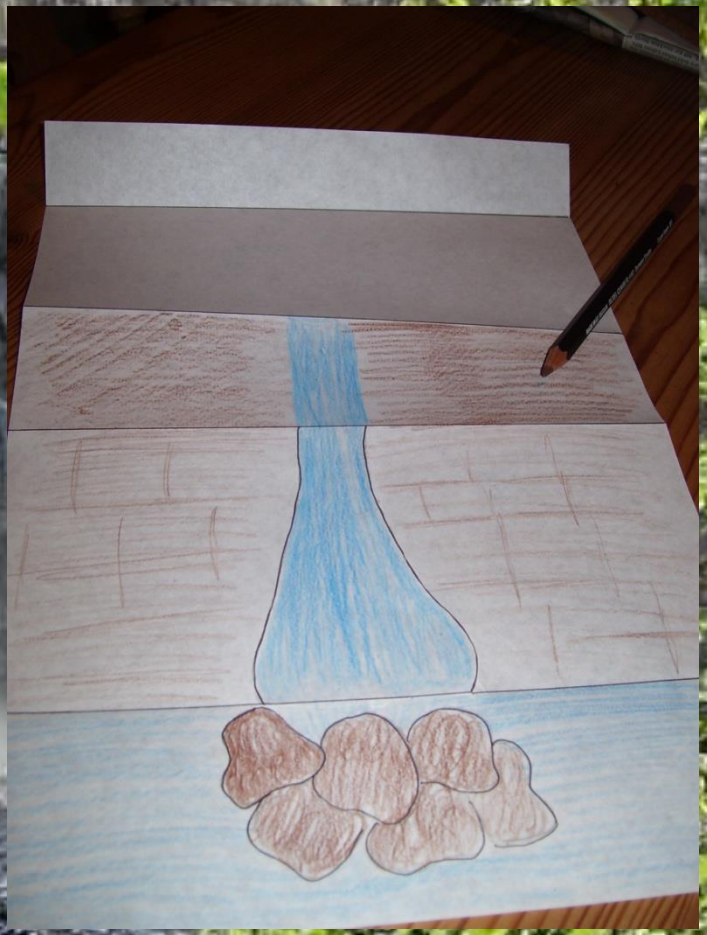
Step 4

Using a brown pencil crayon colour in the rocks.



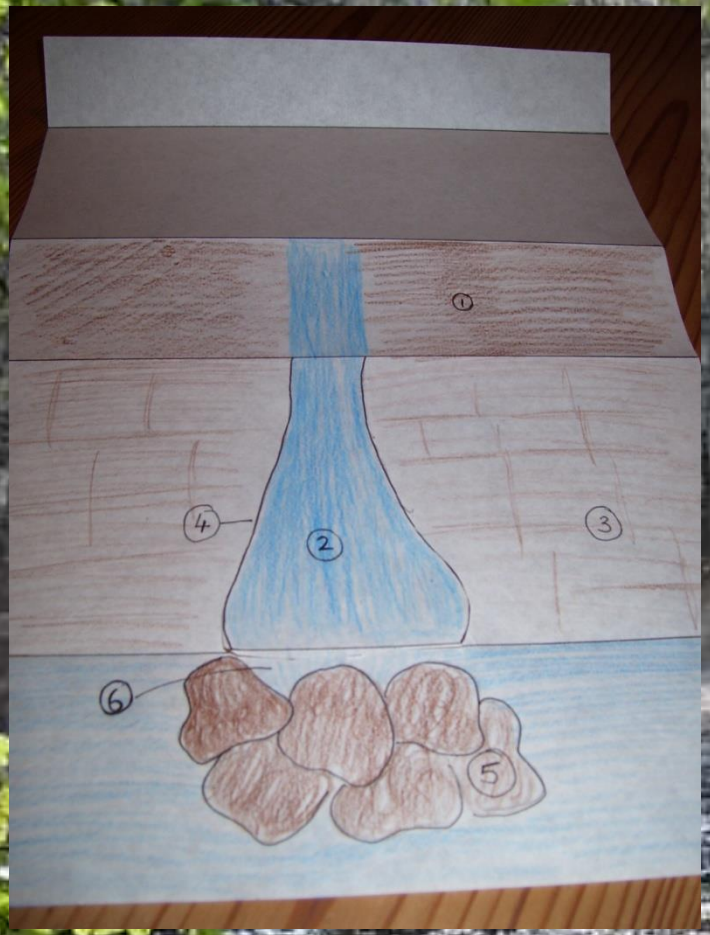
Step 5

Colour in the remaining water blue and the rock brown.



Step 6

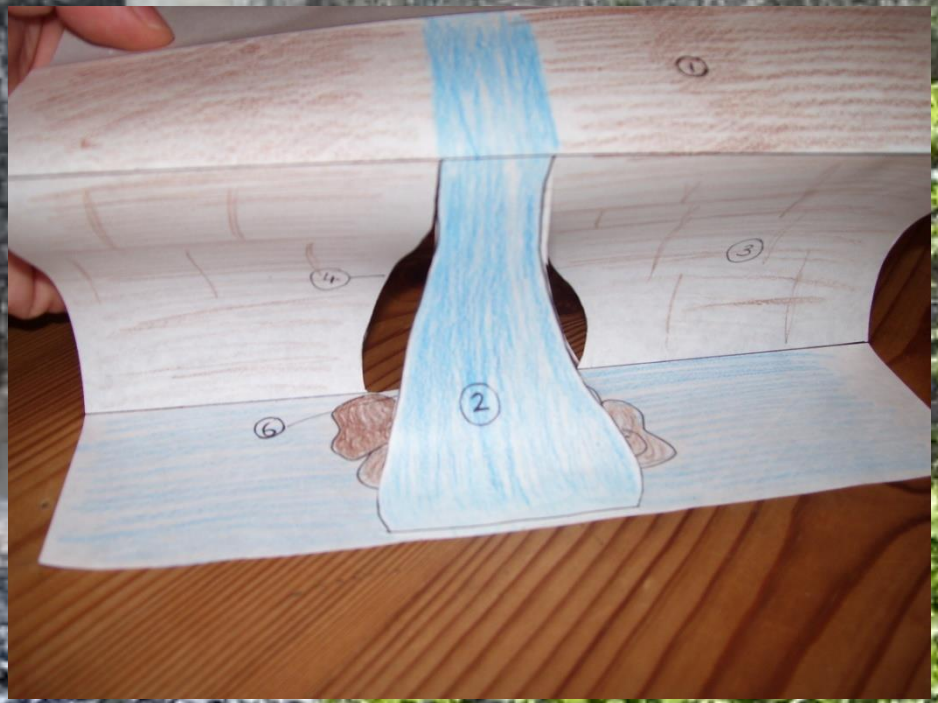
Label the features of your waterfall



1. Hard Rock: This rock is hard so over time a ledge develops.
2. Waterfall: where the water tumbles over the ledge.
3. Soft Rock: This is easier to erode.
4. Gorge: The waterfall cuts its way up the valley.
5. Fallen Rocks : When the ledge collapses it falls into the plunge pool.
6. Plunge Pool: This is the deep pool of water under the actual waterfall.

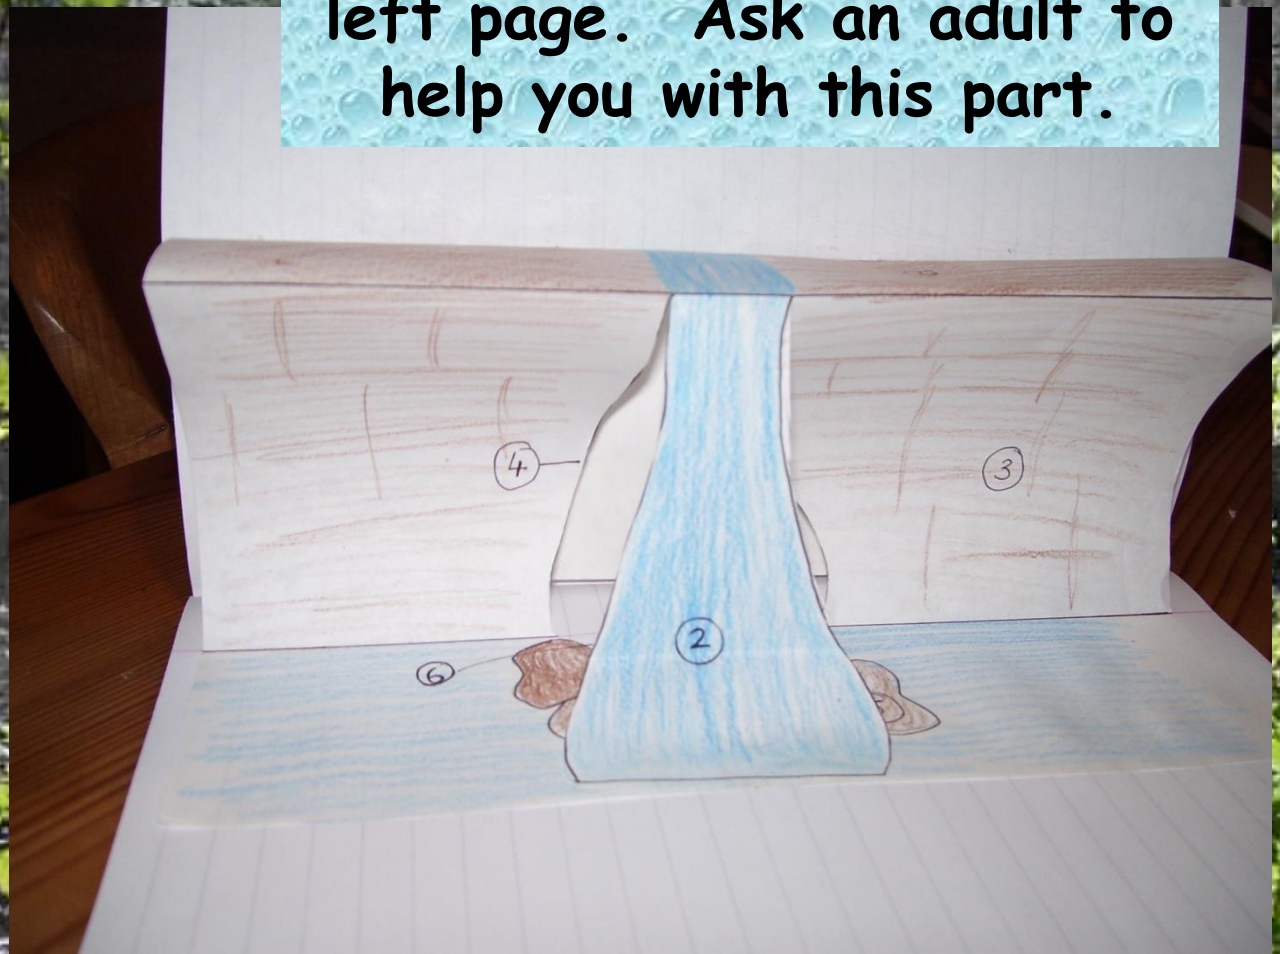
step 7

Stick the waterfall to the end of the paper.



Step 8

Open your book to a double page. Place the model over the centre of the page. Glue the base to the right page and the back to the left page. Ask an adult to help you with this part.



Step 9

Open your book!
