

# Sources of Light

If you're feeling in the dark about light sources, read on and all will be revealed...

## Light Sources — Give Out Light

Light sources include:

1) The Sun

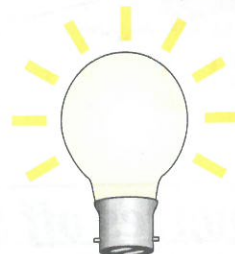

2) Stars

3) Candle flame

4) Electric light

Some objects seem bright, but are only reflecting light from elsewhere. These aren't light sources. This includes the Moon, planets, mirrors and shiny objects.

Remember:

Light source

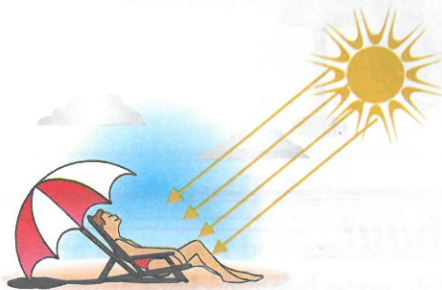

Not light sources...

## Two Important Properties of Light:

1) Light travels in straight lines from a light source.

2) If something opaque is in the way you get a shadow.
